Michigan Temporary Traffic Control

The MMTC certification program is designed for persons who will be assigned Traffic Regulator duties, lead workers, supervisors that will install and review traffic regulator operations and engineering staff that will develop temporary traffic control. This program is designed to exceed the Michigan DOT requirements to be a Traffic Regulator. MTTC deals specifically with the requirements of the 2009 Manual on Uniform Traffic Control Devices, Part 6, the MUTCD and the authority, obligation and training of Traffic Regulators. The MTTC program promotes the proper use of traffic control devices, traffic control procedures, MiOSHA requirements, safety apparel and general traffic safety. This program highlights requirements for signing, special Traffic Regulator operations, including single and intermediate Traffic Regulator, Haul Road operations and the use of police officers.

Employers are responsible for properly training employees in the installation, inspection, operation and maintenance of temporary traffic control devices. This one-day program, divided into ten segments, incorporates a post-training quiz following each segment. Upon conclusion of MTTC, participants should be prepared for the 100 multiple choice question certification examination. 70% is required to successfully pass.
